

ABHISHEK NEJKAR

857-398-0541 | nejkar.a@northeastern.edu | [Linkedin](#) | [Github](#) | [Portfolio](#)

Education

Northeastern University

Sep 2024 – Aug 2026

Master of Science in Computer Information Systems

Boston, MA

Coursework: Algorithms, Web Development, Object-Oriented Design, Cloud Computing, Design Patterns

GPA 3.9

Technical Skills

Programming Languages: Java, Python, C++, HTML, CSS, Go, JavaScript, TypeScript

Frameworks and Libraries: Django, React, Angular, Node.js, Express.js, Next.js, Bootstrap, Spring Boot

Data and Messaging: MongoDB, PostgreSQL, MySQL, Redis, Apache Kafka, gRPC, GraphQL, REST

Cloud and Infrastructure: AWS, GCP, Docker, Kubernetes, Terraform, Packer, GitHub Actions, Linux

Work Experience

Software Engineer Intern

Sep 2025 – Dec 2025

Clear Lakes Dental LLC

Little Canada, MN

- Built SMS/email patient reminder system (React, Node.js, PostgreSQL) with configurable scheduling and retry logic, reducing no-shows from 18% to 11%
- Refactored 3 REST endpoints with pagination and payload compression, improving data transfer rates
- Used Claude for test generation and code review, reducing PR cycle time from 2.5 to 2 days

Software Engineer

Sep 2022 – Jul 2024

Tata Consultancy Services Ltd

Pune, MH

- Developed Java Spring Boot microservices handling 50K+ daily transactions; optimized API latency via connection pooling and query tuning
- Implemented Apache Kafka event-driven architecture across 4 services, reducing synchronous call volume and eliminating peak-load timeout failures
- Managed GKE deployments with HPA and RBAC, sustaining 99.9% uptime for 10K+ concurrent users
- Expanded JUnit coverage across 3 microservices and integrated SAST scans into CI pipelines for PII compliance

Projects

Scribbly | [Live Website](#) | [GitHub](#)

- Developed a real-time collaborative whiteboard in Angular and Node.js with operational transformation for conflict resolution, supporting 50+ concurrent sessions with sub-100ms sync latency
- Implemented JWT and bcrypt authentication with role-based access controls, and optimized WebSocket event batching to reduce perceived drawing latency by 18%

HobbyHub | [Live Website](#) | [GitHub](#)

- Executed the front-end development of a community platform with React and TailwindCSS, enabling secure user onboarding, community formation, and streamlined event scheduling
- Constructed a suite of REST APIs with Node and MongoDB to facilitate user authentication, community interactions, event management, and image processing, while upholding strict data integrity

Slate | [GitHub](#)

- Engineered full-stack restaurant platform (Flutter, Django) across Android/Web with 11 screens and 20+ REST endpoints; implemented stateless JWT authentication, role-based access control, and session-based cart merging on login
- Built reactive state management via Riverpod with parameterized caching eliminating redundant API calls; delivered 5-stage order pipeline supporting Dine-In/Takeaway/Delivery, composite billing, and advanced discovery

Amplify |

- Built a stateless REST API in Spring Boot with PostgreSQL and S3 multipart uploads, deployed on multi-cloud infrastructure (AWS, GCP) provisioned via Terraform and Packer; achieved zero 500-level production errors
- Implemented CI/CD via GitHub Actions automating integration tests, image builds, and Terraform validation; enforced PR quality gates that eliminated defect escapes and enabled zero-touch deployments
